

PG&E IS HELPING YOU WITH SOLAR ENERGY SOLUTIONS

93 million miles away, the sun is waiting to turn your roof into its own miniature power plant. Using solar energy to power your home not only lowers your energy costs over time, but also generates electricity free of harmful greenhouse gas and CO2 emissions. So it's not only good for your wallet, but also the environment.

PG&E in collaboration with the City of Rocklin is providing a free residential solar workshop in Rocklin so you can learn what you need to know about solar energy and bring you closer to making the decision to install solar panels on your roof and install that miniature power plant!

This educational event, to demystify solar and help you become a smarter consumer, will be hosted at the **Rocklin City Counsel Chambers** on **October 27th** from **10 am till noon**. The class is being taught by PG&E's solar energy expert specifically for home owners and is free to the community!
